

Session Tracking in Struts 2.5

Addition to Action bean code

```
import com.opensymphony.xwork2.ActionContext;
import com.opensymphony.xwork2.ActionSupport;
import java.util.Map;
```

```
public class CheckAction extends ActionSupport
{
:
:
}
```

Store value in session in Action Bean

```
Map session = ActionContext.getContext().getSession();
session.put("key",value);
```

Retrieve value from session on JSP

```
<%
String id=session.getAttribute("key").toString();
%>
```

Clear values from session in Action Bean

```
Map session = ActionContext.getContext().getSession();
session.clear();
session.put("key","initial_value");
```
